SEWERIN

Measurable success by Sewerin equipment

Congratulations. You have chosen a quality instrument manufactured by Hermann Sewerin GmbH.

Our equipment will provide you with the highest standards of performance, safety and efficiency. They correspond with the national and international guide-lines.

Please read and understand the following operating instructions before using the equipment; they will help you to use the instrument quickly and competently. If you have any queries we are available to offer advice and assistance at any time.

Yours

Hermann Sewerin GmbH

Operating Instructions

SR2-DO

01.08.2005 – V2.1 – 103952 – en

To ensure reliable operation and safety, it is required to pay attention to the following notes.
Hermann Sewerin GmbH is not liable for damage caused by failure to comply with these notes. The guarantee and liability conditions of the sales and delivery conditions of Hermann Sewerin GmbH are not extended by the following notes.

- This product may only be taken into operation after reading thoroughly the accompanying operating instructions.
- This product may only be used for intended applications.
- This product is destined for industrial and commercial applications.
- Repairs may only be performed by the manufacturer or appropriately trained staff.
- The manufacturer is not liable for damage resulting from arbitrary modifications of the product.
- Only spare parts may be used which are approved by Hermann Sewerin GmbH.
- Only approved battery types may be used.

Technical changes within the scope of further development reserved.

Used symbols:

CAUTION!
This symbol is used to indicate dangers which may either result in hazards for the operators or in severe damage – or even destruction – of the product.

Note:
This symbol is used to call attention to information and tips which may be helpful and which are exceeding the basic operating procedures.

1 SR2-DO system

1.1 Multiple gas detector

The **SR2-DO** is a combined measuring instrument for a number of different gases. It consists of:

- the basic instrument, incorporating a pump and a data memory for documentation purposes
- Slots to plug-in a max. of 4 sensors to monitor up to 5 different gases (in case of using the combination sensor for methane and carbon dioxide)

The following sensors are available:

- methane CH_4/carbon dioxide CO_2 (combination sensor)
- oxygen O_2
- hydrogen sulphide H_2S
- ammonia NH_3
- carbon monoxide CO

1.2 Fields of application

The **SR2-DO** is suitable for the following fields of application:

Atmospheric monitoring in shafts and chambers in these fields:

- drinking-water supply (metering and transfer shafts)
- district-heating systems
- telecommunications shafts
- effluent-treatment systems (sewage works, pump sumps, digestion-tank areas, rain-overflow basins)
- traffic areas
- accessible culverts
- biogas plants

- **Measuring explosive mixtures**
  - due to leaking gas pipes near the shaft
  - due to the proximity of oil, coal, natural-gas or LPG storage facilities
  - due to the proximity of landfill sites, marshland, chemical works, filling stations or refineries
  - due to cleaning or coating work with substances containing solvents
  - due to the prohibited introduction of combustible substances into the canal network (e.g. petrol leaks)
  - due to the formation of methane in biogas plants

- **Measuring a shortage of oxygen/excess of nitrogen**
  - due to an increase in other gas components
  - due to the decomposition of organic waste in shafts (e.g. wet leaves)
  - due to welding and heating processes with naked flames
  - due to air depletion
- **Measuring toxic gases**
  - due to the formation of carbon dioxide by bacterial conversion processes
  - due to the formation of carbon dioxide in areas where there is mineral water
  - due to the formation of carbon dioxide in exhaled air
  - due to the formation of hydrogen sulphide in effluent
  - due to the formation of CO_2 and H_2S in biogas plants

1.3 Test certificates

Passive explosion protection

The **SR2-DO** has been tested for explosion protection in accordance with the European norm (CENELEC):

EC prototype test certificate:	PTB 96 ATEX 2166, plus supplements 1 and 3
Identification:	Ⓔx II 2 G EEx ib d IIB T3
Testing institution:	Physikalisch-Technische Bundesanstalt, Braunschweig

The test certificates can be found in the appendix.

Note:
Explosion protection is valid only for detectors with serial nos. beginning with 046 03 XXXX.

Detectors with serial nos. beginning with 046 01 XXXX have no explosion protection.

1.4 Charging equipment

The **SR2-DO** can be recharged in the workshop or the emergency vehicle:

Docking station HS 1,2 A

- to charge the instrument, with a connection socket for the AC/DC adapter or a car cable

AC/DC adapter M4

- to connect the docking station HS 1,2 A to a 100 – 240-volt~ mains

Car cable 12 V= mounting

- to connect the docking station HS 1,2 A to 12 volt= vehicle electrics
- with built-in fuse and blade receptacles

Car cable M4 12 V= mobile

- to connect the docking station HS 1,2 A to 12 volt= vehicle electrics
- with built-in fuse and connector for cigarette lighter

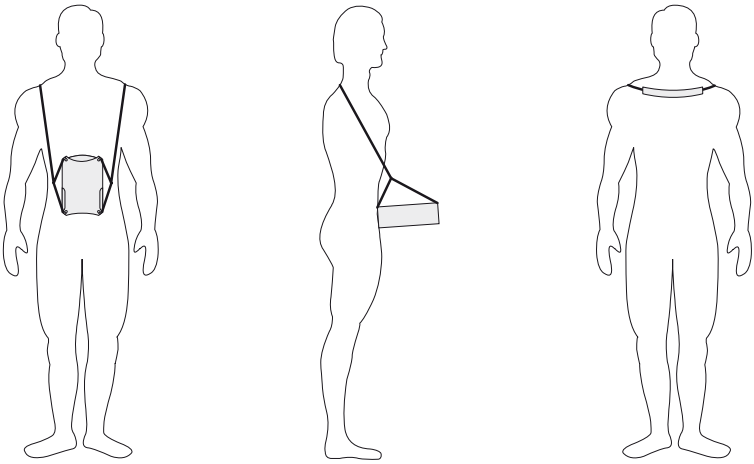
Car cable M4 24 V= mounting

- to connect the docking station HS 1,2 A to 24 volt= vehicle electrics
- with voltage transformer and blade receptacles

1.5 Carrying equipment

Carrying system Triangel

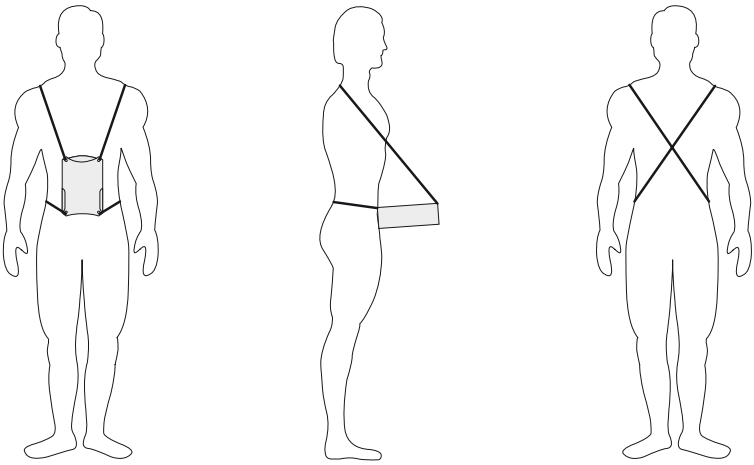
a quick and easy way of carrying the instrument, consisting of a carrying strap and neck-pad.



front view **side view** **back view**

Carrying system Cross Belt

a comfortable way to carry the instrument for longer periods, consisting of 2 carrying straps crossed at the back.



front view **side view** **back view**

Case VT/SR

- lockable system case with aluminium frame
- foam lining with compartments
- the instrument can be charged in the case
- operating-manual compartment
- dimensions excluding handle: 710 x 180 x 420 mm (W x H x D)

Case VT/SR universal

- semi-rigid system case
- foam lining with compartments
- compartment for operating manual
- dimensions excluding handle: 540 x 130 x 400 mm (W x H x D)

Carrying bag VT/SR

- leather, with inspection window and recesses for instrument connections
- 4 belt eyes for tightening carrying systems „Triangel“ and „Cross Belt“
- flap with velcro-fastening to be worn at the belt
- useable in hazardous areas

1.6 Probes

Hand probe

- for measuring concentrations in containers or at inaccessible locations
- grip with extension and hose connector, overall length 900 mm

Flexible manual probes

- for measuring concentrations in containers or at inaccessible locations
- grip with flexible probe tip and hose (overall lengths 360 mm)

Floating probe

- for measuring concentrations in shafts
- floater with intake orifice and hose connection

Probe hose

- to connect the warning device and the probe, with hydrophobic filter for moisture protection (in lengths 1 m, 2 m, 6 m)

1.7 Test equipment

The following accessories are available for monitoring and testing the pump performance and sensitivity of the **SR2-DO**:

Test set SPE VOL

- for mobile and in-vehicle use
- with connection for SEWERIN test gas cans, flow meter, manometer, release key and connection hose

Test gas cans

- for testing and adjusting display sensitivity
- various test gas concentrations in 1-litre cans at pressures of about 12 bar

Test set SPE2

- for non-mobile use in the workshop
- with connections for several SEWERIN pressure cylinders, pressure and flow meter, release key and connection hoses

(not shown)

Pressure cylinders

- for testing and adjusting display sensitivity
- various test gas concentrations in 0.4/2.0/10.0 litre steel cylinders at pressures of 100 – 150 bar

2 Safety

2.1 Safety notes

CAUTION!
Please note that when the **SR2-DO** is in measuring operation the gas sample is released into the ambient air through its outlet.

Special care must be taken to ensure that this does not produce an explosive or toxic gas mixture, especially during use in confined spaces.

It may therefore be necessary to use a gas-warning device to monitor the air. We recommend the EX-TEC Combi.

CAUTION!
Always use original SEWERIN accessories with the **SR2-DO**.

CAUTION!
Always use a probe hose with a hydrophobic filter.

CAUTION!
Do not operate outside the permissible temperature range of -10 °C to +40 °C.

CAUTION!
The **SR2-DO** may not be recharged in an area that is exposed to the danger of explosion.

CAUTION!
Use the test gases only in well-ventilated areas, as some concentrations exceed the pertinent MAK values.

CAUTION!
The **SR2-DO** satisfies the limits of the EMV regulation. When using it near (mobile) radio equipment please also observe the instructions in their manuals.

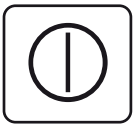
3 Measuring operation

3.1 Instrument description

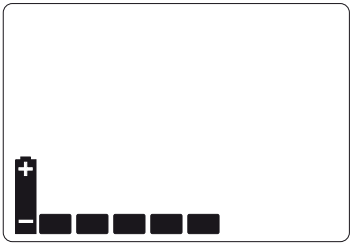
Note:
Fold out the illustration inside the front cover!

Item	description	function
1	alarm lamp	optical warning on: ● breaching alarm thresholds ● display of error messages
2	LCD	display of: ● gas concentrations ● menu items ● operating conditions ● error messages
3	probe conncection	connection for: ● probe hose ● test set
4	keypad	instrument operation
5	attachment	for carrying systems: ● triangel ● cross-strap
6	outlet	for the gas sample
7	buzzer	acoustic warning on: ● breaching alarm thresholds ● display of error messages
8	interface	serial RS-232 interface for connection to a PC

3.2 Switching on



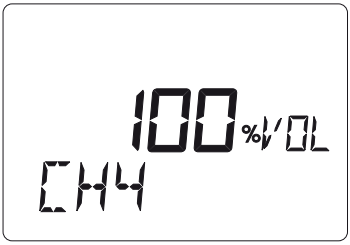
- always switch the instrument on in **„fresh air“**
- press the **ON/OFF key** for about 3 seconds
- the optical and acoustic control signals (items 1 and 7) operate for about 3 seconds
- the LCD illumination automatically switches on for about 4 minutes



- available operating hours are displayed in the form of the battery symbol and bars (e.g.: 5 hours = 5 bars)
- the built-in pump runs at constant power

- the software version number (e.g. **2.1**) and instrument type **(SR2-DO)** are displayed

Note:
All following instrument displays show a **SR2-DO** to measure 5 gases (CH_4 – CO_2 – O_2 – H_2S – NH_3)!

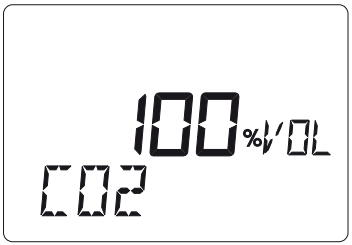


CH_4 - methane

- the measurement range for methane is displayed:

  0.0 – 100 vol.%

- depending on your last setting a display in the **vol.%, %GAZ** quantities may also be possible (cf. section 7.4: Adjusting the CH_4 sensor)

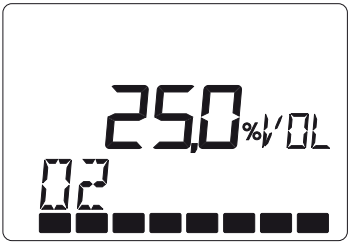


CO_2 - carbon dioxide

- the measurement range for carbon dioxide is displayed:

  0 – 100 vol.%

- depending on your last setting a display in the **vol.%, %GAZ** quantities may be possible (cf. section 7.5: Setting the measurement quantity)



O_2 - oxygen

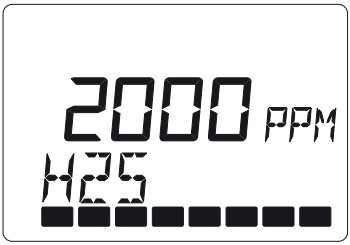
- the measurement range for oxygen is displayed:

  0.0 – 25.0 vol.%

- depending on your last setting a display in the **vol.%, %GAZ** quantities may be possible (cf. section 7.5: Setting the measurement quantity)

- display of the sensor lifetime in the form of bars (cf. section 10.2: Technical data):

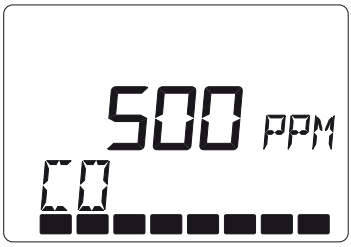
  8 bars = 100%



H_2S - hydrogen sulphide

- the measurement range for hydrogen sulphide is displayed:

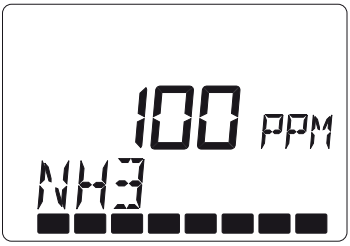
  0 – 2000 PPM



CO - carbon monoxide

- the measurement range for carbon monoxide is displayed:

  0 – 500 PPM



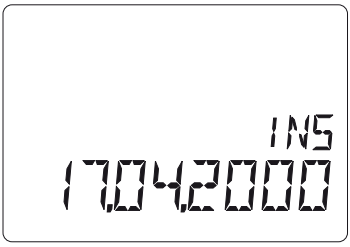
NH_3 - ammonia

- the measurement range for ammonia is displayed**:**

  0 – 100 PPM

Time/date

- the current time (e.g.**17:49**) and date (e.g. **24.02.2000**) are displayed
- properly-set values are important for the documentation of your readings
- you can correct any variances (cf. section 9.2: Setting the date/time)



Next scheduled inspection
(display optional)

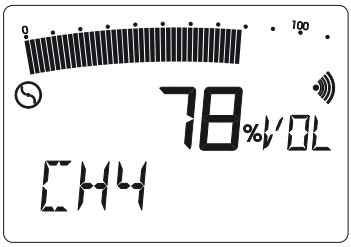
- if you have set an inspection interval, the next scheduled inspection date (e.g. **17.04.2000**) is displayed for about 3 seconds (cf. section 9.3: Setting the inspection interval)
- depending on the current and inspection dates, the intermittent or continuous alarm may also be triggered (items 1 and 7)

- clearing the alarm with the **buzzer key** or waiting for 15 seconds switches to measuring operation

Note:
If the **SR2-DO** now automatically switches off, the inspection date has passed with the inspection block switched on (cf. section 9.4: Setting the inspection block).

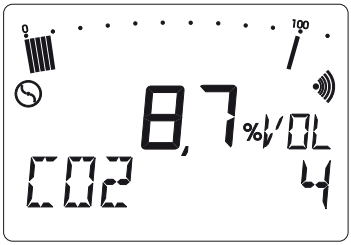
The instrument does not revert to measuring operation until an inspection has been carried out and confirmed.

3.3 Measuring operation



- each gas present is displayed for about 3 seconds; the display then switches to the next
- the pump runs at maximum power
- the alarm threshold is activated

Note:



- on instruments that are only fitted with the CH_4/CO_2 sensor, both readings are displayed simultaneously.

  In this example the readings are 8.7 vol.% CH4 and 4 vol.% CO2.

3.4 Switching gases

- pressing the **hand key** toggles between automatic and manual gas switching

Automatic switching

- each gas is displayed for about 3 seconds; then the display switches to the next

Manual switching

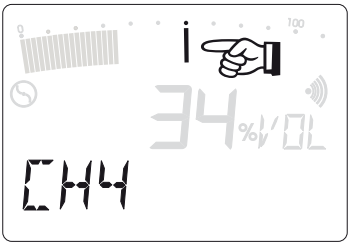
- each gas remains displayed until you press a **arrow key**
- pressing a **arrow key** switches to the next gas

3.5 Alarm

An alarm threshold can be set on the **SR2-DO**. The alarm is triggered if the concentration of CH_4, CO_2, or O_2 exceeds this threshold.
(Note: no alarm threshold is possible for the H_2S concentration.)

3.6 Displaying the alarm thresholds

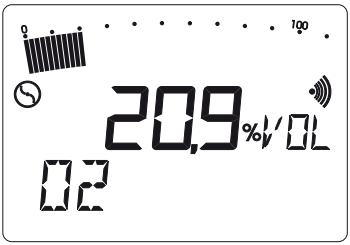
- press and hold down the **threshold value key**: the current alarm threshold is displayed by a flashing bar



- the alarm can be cleared
- if the concentration falls below this alarm threshold, the optical and acoustic alarms (items 1 and 7) switch off

3.7 Zero-point correction

- after it is flushed with "fresh air" the **SR2-DO** may deviate from its zero point (observe the tolerances); it can be manually corrected as follows:
- press the **zero point key** to set the zero point of the gas displayed (up to 5 % from the end of the measuring range)
- if the zero point cannot be set, the sensor must be adjusted (cf. chapter 7: Adjustment menu)



O_2 zero point

- the zero point for oxygen is **20.9** vol.%, since this is the concentration found in normal fresh air

3.8 Illumination and contrast

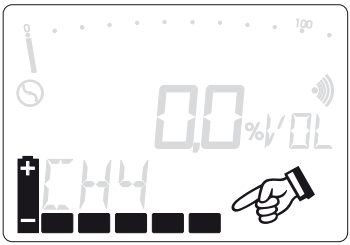
Illumination

- pressing the **light key** switches the LCD illumination on and off
- the illumination automatically switches off again after about 4 minutes

Contrast

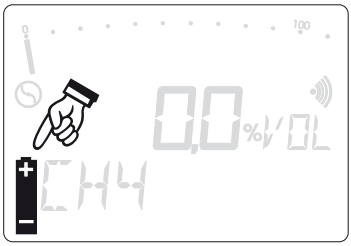
- simultaneously pressing the **light key** and a **arrow key** increases or reduces the contrast of the LCD
- your last setting is preserved even when the instrument is switched off

3.9 Operating-hours display and battery alarm



Operating-hours display

- simultaneously pressing **both arrow keys** during measuring operation displays the number of operating hours remaining (e.g. 5 hours)
- this display (battery symbol and bars) disappears automatically after about 10 seconds



Battery alarm

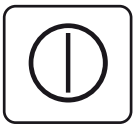
- if the charge falls below a threshold value, the battery symbol appears, the alarm lamp flashes and an acoustic signal is triggered

- the battery alarm can be cleared with the **buzzer key**

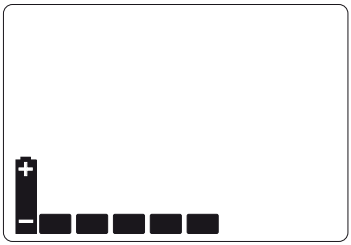
3.10 Pump function

- the pump runs at constant power; it can be switched on and off with the **pump key** at any time
- on instruments with an H_2S sensor the pump cannot be switched off

3.11 Switching off



- press the **ON/OFF key** for about 3 seconds
- the optical and acoustic control signals (items 1 and 7) operate for about 3 seconds



- remaining operating hours are displayed in the form of the battery symbol and bars (e.g. 5 hours = 5 bars)

3.12 Interface

The instrument can be connected to a PC via the RS 232 serial interface. For details please consult the manual for the PC software required.

4 Charging

4.1 Charging and charge maintenance

Charging

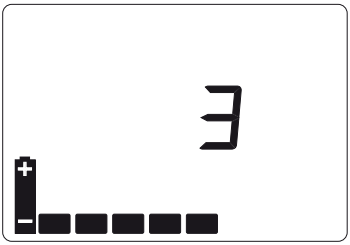
When fully charged the instrument has a **minimum** of 10 hours' operating time with the pump running.

To charge the instrument you will need the **docking station HS 1.2 A** (see illustration), which can be used in the workshop or the emergency vehicle.

The following connection sockets can be found on the side of the docking station HS 1.2 A:

- AC/DC adapter M4 100 – 240 V~
- Car cable M4 12 V= mounting
- Car cable M4 12 V= mobile
- Car cable M4 24 V= mounting

Switch the **SR2-DO** off and place it in the charger. A display on the following lines appears:



- the instrument still has 5 operating hours left (= 5 bars) and will take another 3 hours to be fully recharged
- if it is fully charged, all the bars appear and the numerical display disappears

Charge maintenance

As soon as the instrument is fully charged it automatically switches to charge maintenance. It can be left in the docking station HS 1.2 A until the next time it is needed.

4.2 Self discharge

If the instrument is not placed in the docking station HS 1.2 A when it is switched off, this will cause the nickel-cadmium battery to self-discharge, reducing the remaining operating time.

After a maximum of 30 days the instrument indicates no remaining operating hours and it must be recharged.

Note:
Brief periods of use and protracted disuse may in the long term lead to the so-called „memory effect“, which means that the actual battery capacity available is less than what is shown in the display.

You can counteract this by fully discharging the **SR2-DO** regularly (e.g. once a month): leave it switched on until it switches itself off, then recharge it.

5 Testing the instrument

5.1 Testing/maintenance

The instrument tests required and prescribed by DVGW G 465-4 (Technical Communications, re-ference) are divided into the following sections. Testing includes the requisite equipment.

What?	Who?	When?
Function testing	user	prior to start working
Testing display accuracy (adjustment)	specialist or specialist company	daily to half-yearly
Servicing, maintenance	SEWERIN, specialist or authorised company	annually

Function test

This is the simplest form of instrument test. Carried out by the **user** before use, it comprises the following points:

- external condition including probe systems
- function of the operating controls
- battery-charging check
- inspection of the pump and the intake channel
- pump function
- zero-point check

Checking display sensitivity (adjustment)

Testing frequency must be specified as a function of the sensors fitted and the use of the instrument. It can be anywhere between daily and half-yearly.

Testing must be carried out by an expert on the operator‘s own staff, by a specialist firm or by Sewerin itself.

The function test should be carried out at the same time.

Upkeep - maintenance and repair

The instrument must be maintained at least once a year by **SEWERIN Service**, a **specialist company** authorised by SEWERIN or a SEWERIN-authorised **specialist**.

Certificates must be issued accordingly.

The test plaque on the instrument confirms when maintenance was last carried out and indicates the next scheduled date (e.g. 5/00 = May 2000).

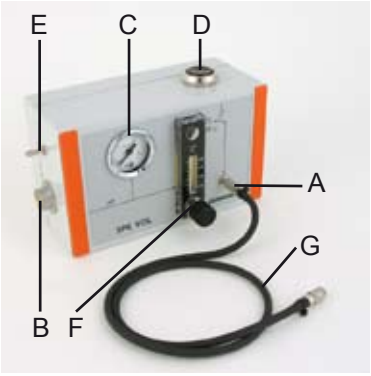
Annual maintenance and repair must cover at least the specialist care and adjustment of the instrument and the replacement of components with a limited useful life.

Note:
Where instruments have explosion protection the applicable regulations must be be observed.

Note:
Technicians responsible for upkeep must have been trained and instructed by Sewerin.

5.2 Test set

The **test set SPE VOL** is available to test the pump power, zero point and sensitivity:



(fig. 1)

Item	Description	Function
A	Device connection	Connection with: ● probe connection ● test heads
B	Test gas connection	Connection for: ● test gas bottles ● pressure hose adapter (in conjunction with pressure cylinder and pressure reducer)
C	Manometer	Display of remaining pressure inside the test gas container
D	Release button	Release of test gas
E	Fresh air supply	Opening for: ● aspirating fresh air ● fresh air hose
F	Needle valve with flowmeter	Setting the pump power reading the pump power in litres per hour (l/h)
G	Connection hose	Connected to: ● device

5.3 Test gases

The following test gases are used in conjunction with the **test set SPE VOL** to test the zero point and sensitivity:

Methane CH_4	
- zero point:	fresh air
- sensitivity:	100 vol.% CH_4
Carbon dioxide CO_2	
- zero point:	fresh air
- sensitivity:	100 vol.% CO_2
Oxygen O_2	
- zero point:	100 vol.% CH_4
- sensitivity:	fresh air
Hydrogen sulphide H_2S	
- zero point:	fresh air
- sensitivity:	40 ppm H_2S in synthetic air
Carbon monoxide CO	
- zero point:	fresh air
- sensitivity:	40 ppm
Ammonia NH_3	
- zero point:	fresh air
- sensitivity:	50 ppm

These gases are supplied in 5 test gas bottles:

- 100 vol.% CH_4
- 100 vol.% CO_2
- 40 ppm H_2S in synthetic air
- 50 ppm NH_3 in nitrogen
- 40 ppm CO in synthetic air

5.4 Testing pump power, zero point and sensitivity

Proceed as follows:

- screw the selected test gas bottle onto the test set SPE VOL (fig. 1 - item B) as far as it will go
- connect the instrument's probe connection (item 3) with the hose of the test set SPE VOL (fig. 1, item A)
- switch the instrument on; the pump aspirates **fresh air** through the test set SPE VOL (fig. 1, item E)
- enter your test results in the test report

Pump power

- use the needle valve (fig. 1, item F) to set the flow to maximum; it must be greater than 30 l/h

Zero point

- wait for the instrument to settle at a stable zero point; permissible tolerances with fresh air are:

Gas	Tolerance
Methane CH_4	-1.0 – +1.0 vol.%
Carbon dioxide CO_2	-1 – +1 vol.%
Hydrogen sulphide H_2S	-10 – +10 ppm
Carbon monoxide CO	-3 – +3 ppm
Ammonia NH_3	-3 – +3 ppm

In a fresh air environment, the display of the oxygen sensor will indicate a nominal value of 20.9 vol.%.

For zero calibration, the sensor is exposed to a pure CH_4 environment (100 % by volume).

Tolerances:

Oxygen O_2	-0.5 – +0.5 vol.%

If display values are outside these tolerances the pertinent sensor must be readjusted (cf. section 7: Adjustment menu).

Sensitivity

- press the release key (fig. 1, item D) on the test set SPE VOL and adjust the flow to the fresh air value (fig. 1, item F)
- hold down the release key until the displayed concentration has settled at a stable value; permissible tolerances with test gases:

Gas	Tolerance
Methane CH_4	97 – 103 vol.%
Carbon dioxide CO_2	97 – 103 vol.%
Hydrogen sulphide H_2S	36 – 44 ppm
Carbon monoxide CO	37 – 43 ppm
Ammonia NH_3	47 – 53 ppm

The oxygen sensor is tested for its sensitivity in a fresh air environment.

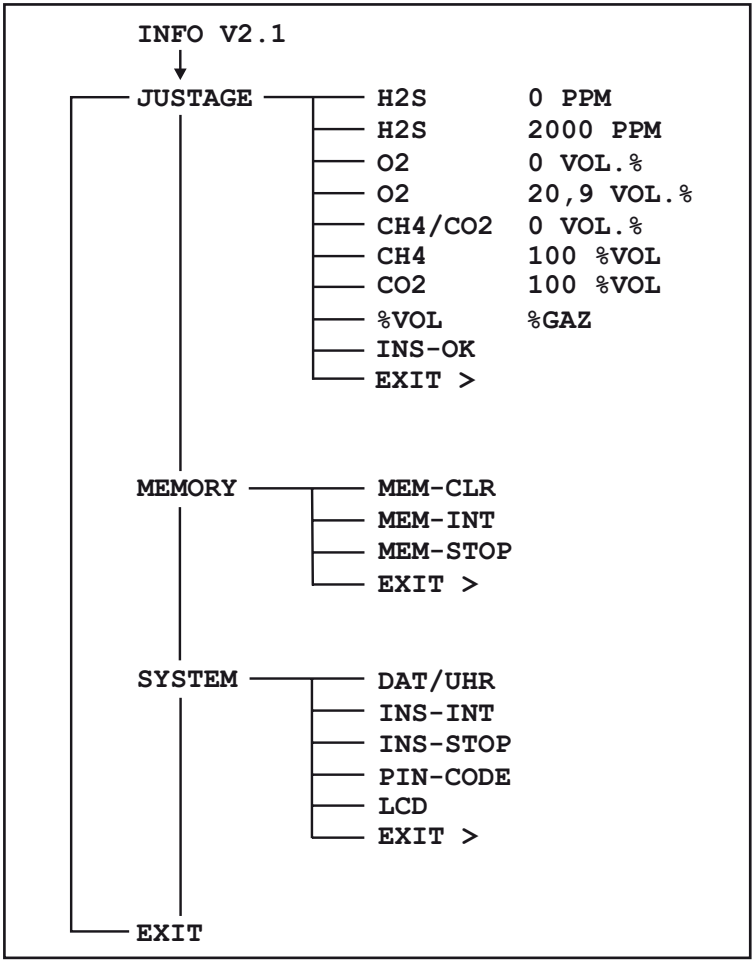
Tolerances:

Oxygen O_2 20.4 – 21.4 vol.%

If display values are outside these tolerances the pertinent sensor must be readjusted (cf. section 7: Adjustment menu).

6 Info menu

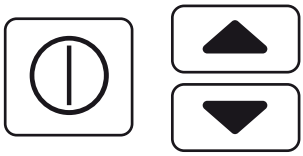
6.1 Menu structure



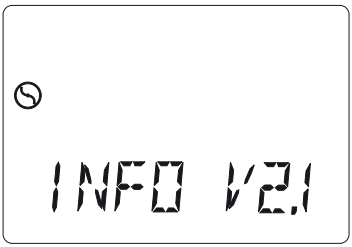
Note:
Volume and style of the menu items in the **adjustment menu** depend on number and type of sensors built-in to your instrument.

6.2 Overview

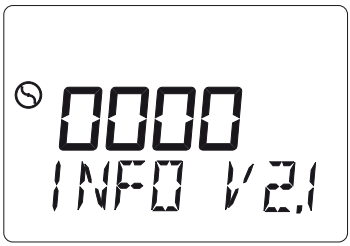
The information menu is accessible only when the **SR2-DO** is switched off.



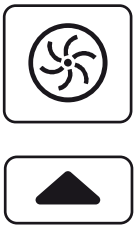
- now simultaneously press the following **3 keys**



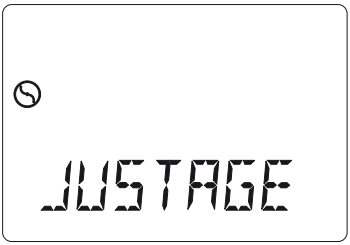
- you are now in the **INFO** menu item (cf. menu structure)
- the software version number (e.g. **V2.1**) is displayed and the LCD illumination automatically switches on for about 4 minutes



- you must now enter your **PIN code** (cf. section 9.5: Setting the PIN code)
- **0001** = factory settings
- only now do you have access to all menu items

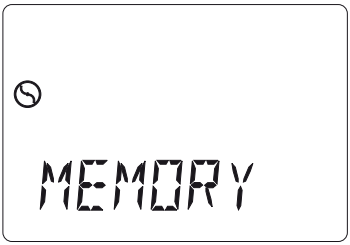


- the pump runs at constant power; it can be switched on or off with the **pump key** at any time
- the **arrow-up key** returns you to the menu structure



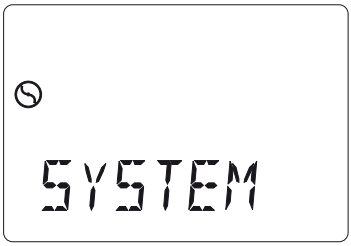
- you are now in the **adjustment** menu item (cf. section 7: Adjustment menu)

- the **arrow-up key** brings you to the next display



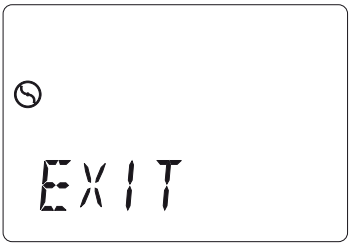
- you are now in the **MEMORY** menu item (cf. section 8: Memory menu)

- the **arrow-up key** brings you to the next display



- you are now in the **SYSTEM** menu item (cf. section 9: System menu)

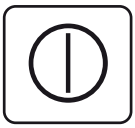
- the **arrow-up key** brings you to the next display



- you are now in the **EXIT** menu item
- there are now 2 ways of continuing to navigate through the menu structure

- pressing the **arrow-up key** returns you to the **adjustment** menu item (cf. menu structure)

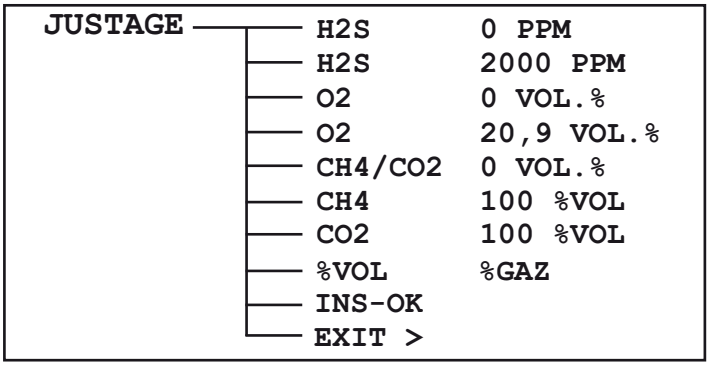
... or



- briefly pressing the **ON/OFF key** leaves the menu structure and the instrument switches to measuring operation

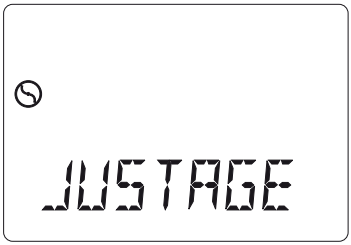
7 Adjustment menu

7.1 Menu structure

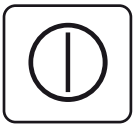


The illustration shows the adjustment menu of a H_2S-, O_2-, CH_4/CO_2 sensor equipped instrument.

Note:
Volume and style of the menu items in the **adjustment menu** depend on number and type of sensors built-in to your instrument.



- you are in the **adjustment** menu item



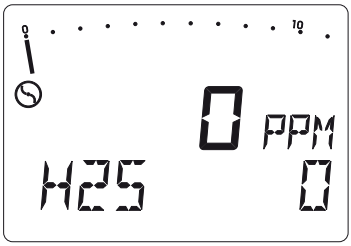
- briefly pressing the **ON/OFF key** brings you to the adjustment menu

7.2 Setting the H_2S sensor

> **Note:**
> The pump always runs during adjustment of the H_2S sensor.

Preparation

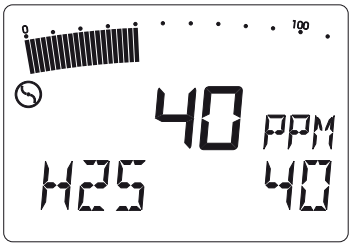
- the instrument hose connects the outlet of the test set to the instrument´s inlet
- switch-on device
- open needle valve fully



H_2S - zero point 0 PPM

- environmental air is sampled
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)

- pressing the **arrow-up key** brings you to the next display



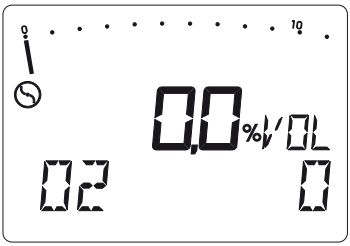
H_2S - sensitivity 40 PPM

- now release **40 PPM H_2S test gas** from the test set SPE VOL
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)
- once this has happened, turn off the test gas feed

7.3 Setting the O_2 sensor

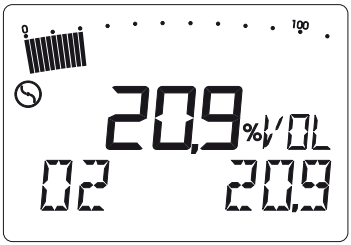
Preparation

- the instrument hose connects the outlet of the test set to the instrument´s inlet
- switch-on device
- open needle valve fully



O_2 - zero point 0 vol.%

- now release **test gas 100 vol.% CH_4** from the test set SPE VOL
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)
- once this has happened, turn off the test gas feed
- pressing the **arrow-up key** brings you to the next display



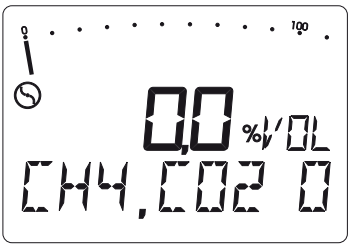
O_2 - sensitivity 20.9 vol.%

- environmental air is sampled
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)

7.4 Setting the CH_4/CO_2 sensor

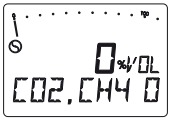
Preparation

- the instrument hose connects the outlet of the test set to the instrument´s inlet
- switch-on device
- open needle valve fully



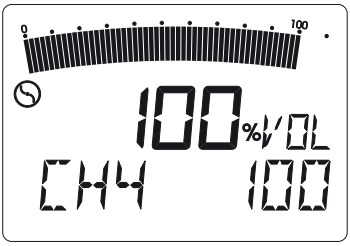
CH_4/CO_2 - zero point 0 vol.%

- environmental air is sampled
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)



- the display switches between **CH4 and CO2**

- pressing the **arrow-up key** brings you to the next display

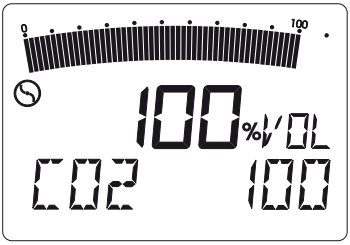


CH_4 - sensitivity 100 vol.%

- now release **test gas 100 vol.% CH_4** from the test set SPE VOL
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)
- once this has happened, turn off the test gas feed

Note:
Wait until the shown concentration reaches 0 vol. % before proceeding.

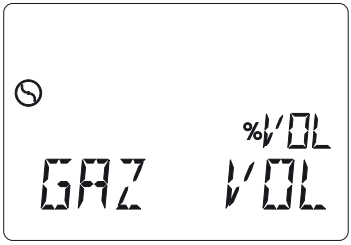
- pressing the **arrow-up key** brings you to the next display



CO_2 - sensitivity 100 vol.%

- now release t**est gas 100 vol.% CO_2** from the test set SPE VOL
- wait for the display to settle at a stable value and confirm the adjustment with the **ON/OFF key** (**OK** appears in the LCD)
- once this has happened, turn off the test gas feed

7.5 Setting the measurement unit

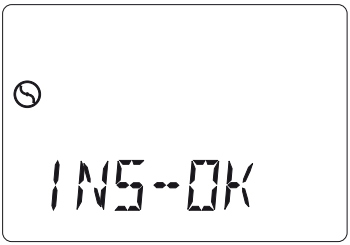


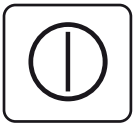
CH_4, CO_2, O_2 - vol.%-range language

- pressing the **ON/OFF key** switches between the following displays in the vol.% range:
  vol.% - display in **vol.%** (D/GB)
  %GAZ - display in **%GAZ** (F)
- confirm the display, e.g. **vol.%**, with the **ON/OFF key** (**OK** appears in the LCD)
- this setting is preserved even when the instrument is switched off

- pressing the **arrow-up key** brings you to the inspection confirmation function

7.6 Inspection confirmation

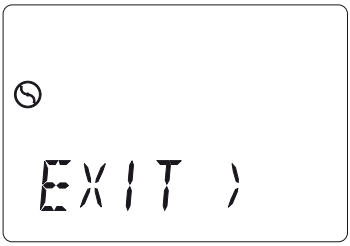




INSPECTION OK

- the **SR2-DO** can remind you of scheduled inspection and adjustment dates
- this requires the **inspection interval** and the **inspection block** to be set in the system menu (cf. sections 9.3 and 9.4)
- confirm the inspection or adjustment you have carried out with the **ON/OFF key** (**OK** appears in the LCD):
- this date is stored as a function of the set date (cf. section 9.2: Setting the date/time)
- the next inspection or adjustment date is calculated in accordance with the set inspection interval
- pressing the **arrow-up key** brings you to the exit from the adjustment menu

7.7 Leaving the adjustment menu

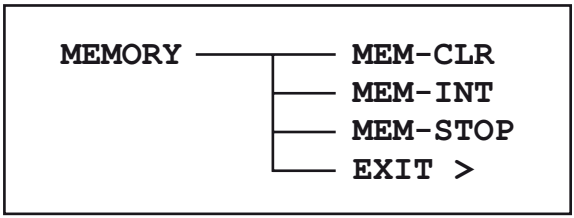


EXIT >

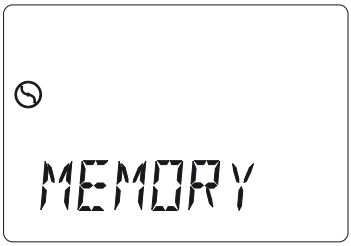
- signpost (>) to menu level 1
- pressing the **ON/OFF key** leaves the adjustment menu
- you are now back at the top main-menu level and can switch between the following menu items:
  - **ADJUSTMENT**
  - **MEMORY**
  - **SYSTEM**
  - **EXIT**

8 Memory menu

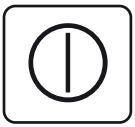
8.1 Menu structure



- the **SR2-DO** continuously stores readings from the sensors that are present
- these can later be read out with the appropriate evaluation software (separate user manual) via the RS 232 interface (item 8)

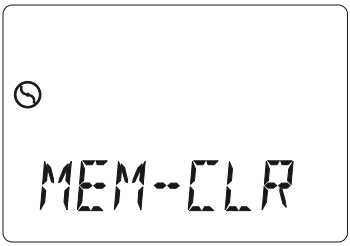


- you are in the **MEMORY** menu item



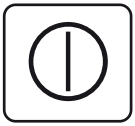
- briefly pressing the **ON/OFF key** brings you to the memory menu

8.2 Clearing memory

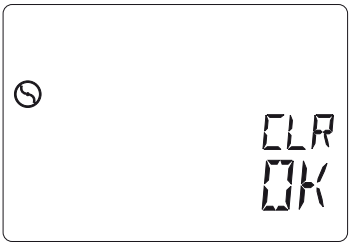


MEMORY CLEAR

- if you have set the **memory mode = stack memory** (cf. section 8.4: Setting memory mode), this function enables you to clear the memory of all readings

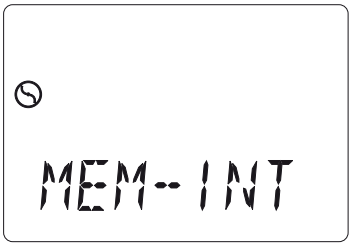


- confirm the clearance with the **ON/OFF key** (**OK** appears in the LCD)



- pressing the **arrow-up key** brings you to the memory-interval setting facility

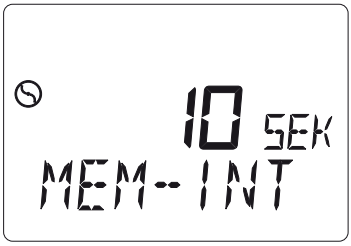
8.3 Setting the memory interval



MEMORY INTERVAL

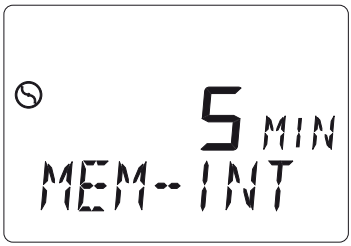
- briefly pressing the **ON/OFF key** brings you to the memory-interval setting facility

- by pressing or holding down a **arrow-up key** you can select the following memory intervals:



seconds range:

- 1 second
- 10 seconds
- 20 seconds
- 30 seconds



minutes range:

- 1 minute
- 2 minutes
- 3 minutes
- 5 minutes
- 10 minutes
- 20 minutes
- 30 minutes

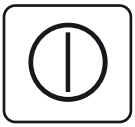
Data-memory capacity

- the **SR2-DO** stores the following values in its data memory:
  - readings for each gas (instantaneous values at the moment of scanning)
- depending on the set memory interval and the number of gases, data memory can continuously record for the following periods (times in hh:mm:ss):

Memory interval	2 gases	3 gases	4 gases
1 sec	1:44:53	1:02:50	0:41:48
10 sec	17:28:50	10:28:20	6:58:05
20 sec	34:57:40	20:56:40	13:56:10
30 sec	52:26:30	31:25:00	20:54:15
1 min	104:53:00	62:50:00	41:48:30
2 min	209:46:00	125:40:00	83:37:00
3 min	314:39:00	188:30:00	125:25:30
5 min	524:25:00	314:10:00	209:02:30
10 min	1048:50:00	628:20:00	418:05:00
20 min	2097:40:00	1256:40:00	836:10:00
30 min	3146:30:00	1885:00:00	1254:15:00

The above figures show the maximum possible recording duration. The recording duration can be reduced by the number of on/off cycles and the number of events occurring.

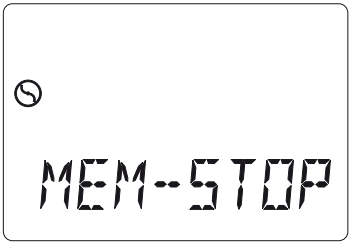
Example: when the instrument is set to warn for 4 gases and the memory interval is set to 1 minute, you can record readings over a period of 41 hours, 48 minutes and 30 seconds.



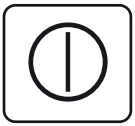
- confirm the interval with the **ON/OFF key**
- this setting is preserved even when the instrument is switched off

- pressing the **arrow-up key** brings you to the memory-mode setting facility

8.4 Setting the memory mode

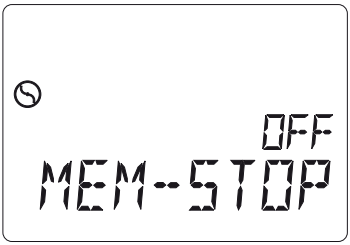


MEMORY STOP



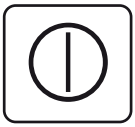
- briefly pressing the **ON/OFF key** brings you to the memory-mode setting facility

- by pressing a **arrow key** you can select the following memory modes:



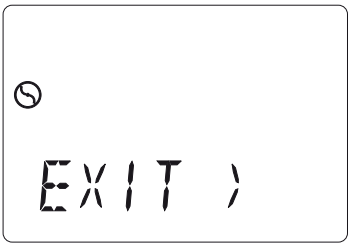
OFF (ring memory)
readings are continuously written to memory; when memory is full the oldest values are overwritten

ON (stack memory)
readings are only written to memory until it is full, thus write-protecting the oldest values



- confirm the memory mode with the **ON/OFF key**
- this setting is preserved even when the instrument is switched off
- pressing the **arrow-up key** brings you to the exit from the memory menu

8.5 Leaving the memory menu

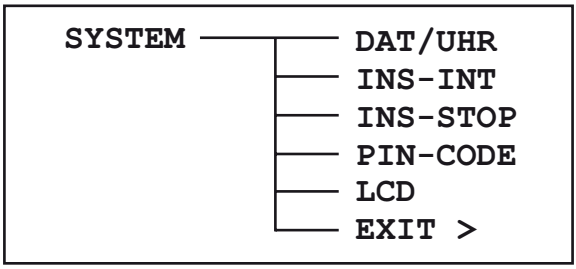


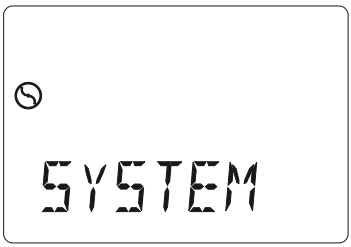
EXIT >

- signpost (>) to menu level 1
- pressing the **ON/OFF key** leaves the memory menu
- you are now back at the top main-menu level and can switch between the following menu items:
  - **JUSTAGE**
  - **MEMORY**
  - **SYSTEM**
  - **EXIT**

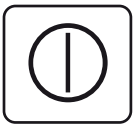
9 System menu

9.1 Menu structure



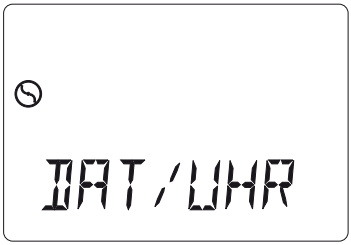


- you are in the **SYSTEM** menu item

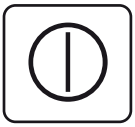


- briefly pressing the **ON/OFF key** brings you to the system menu

9.2 Setting the date/time



DATE/TIME

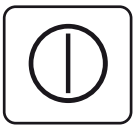


- briefly pressing the **ON/OFF key** brings you to the date/time setting

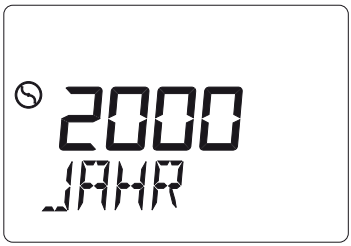
Date

- the last **day** (24 - flashing) and **month** (02) to be set are displayed

- by pressing or holding down a **arrow key** ...



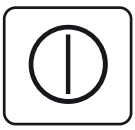
- ... and confirming with the **ON/OFF key** you can set first the day and then the month to the current date



Year

- the **last year** (2000 - flashing) to be set is displayed

- by pressing or holding down a **arrow key** ...

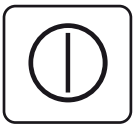


- ... and confirming with the **ON/OFF key** you can set the current year

Time

- the last **hours** (17 - flashing) and **minutes** (49) to be set are displayed

- by pressing or holding down a **arrow key** ...



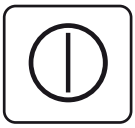
- ... and confirming with the **ON/ OFF key** you can first set the hours and then the minutes to the current time
- these settings are preserved even when the instrument is switched off

- pressing the **arrow-up key** brings you to the inspection-interval setting facility

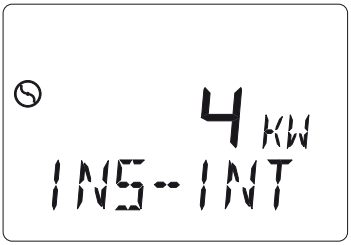
9.3 Setting the inspection interval

INSPECTION INTERVAL

- the **SR2-DO** can remind you of regular scheduled tests (e.g. inspections, adjustments)
- this reminder is based on the inspection interval



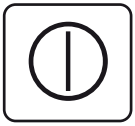
- briefly pressing the **ON/OFF key** brings you to the inspectioninterval setting facility



Inspection interval = 0 – 52 CW

- the last interval to be set is displayed in **CW** (calendar weeks), e.g.:
  - **0 CW** = function inactive
  - **4 CW** = monthly
  - **52 CW** = annual

- by pressing or holding down a **arrow key** ...



- ... and confirming with the **ON/OFF key** you can set the desired interval
- this setting is preserved even when the instrument is switched off

- pressing the **arrow-up key** brings you to the inspection-block setting facility

Example: inspection interval

February 2004						
Mo	Tu	We	Th	Fr	Sa	Su
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29

March 2004						
Mo	Tu	We	Th	Fr	Sa	Su
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31				

Selected inspection interval:
weeks 04

Inspection routine started (i.e. inspection confirmed, cf. section 7.6):
10.02.2004

From these indications concludes: the next inspection has to be effected between
09. – 15.03.2004.

During the next 3 weeks the **SR2-DO** will display the following references to the inspection date:

24.02.2004 – 01.03.2004 (> 1 week before)

LCD:	the **coming** inspection date is displayed for about 3 seconds on switch-on
lamp/buzzer:	inactive
instrument:	the instrument then automatically switches to measuring operation

02.03.2004 – 08.03.2004 (1 week before)

LCD:	the **coming** inspection date is displayed for about 3 seconds on switch-on
lamp/buzzer:	interval light/sound
instrument:	the instrument then automatically switches to measuring operation

09.03.2004 – 15.03.2004 (the scheduled week)

LCD:	the **due** inspection date is displayed on switch on
lamp/buzzer:	interval light/sound
instrument:	when the display is cleared with the buzzer key (item 4) or after waiting for about 15 seconds the instrument automatically switches to measuring operation

16.03.2004 – ... (from 1 week later)

LCD:	the **overdue** inspection date is displayed on switch-on
lamp/buzzer:	interval light/sound
instrument:	depending on the setting of the **INS-STOP** function (cf. section 9.4: Setting the inspection block) the following conditions are possible:

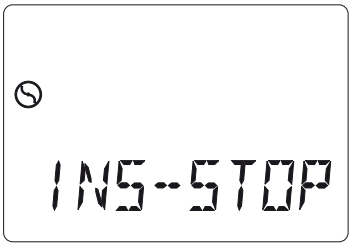
INS-STOP = OFF

when the display is cleared with the buzzer key (item 4) or after waiting for about 15 seconds the instrument automatically switches to measuring operation

INS-STOP = ON

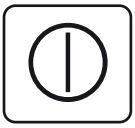
when any key is pressed (item 4) or after waiting for about 15 seconds the instrument automatically switches off

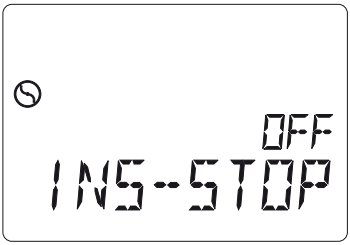
9.4 Setting the inspection block



INSPECTION STOP

- you can activate an inspection block to make sure your **SR2-DO** is regularly checked
- this block does not become active until the next inspection date has passed (cf. section 9.3: Setting the inspection interval)
- after that the instrument cannot be used until the inspection has been **carried out and confirmed** (cf. section 7.9: Inspection confirmation)
- briefly pressing the **ON/OFF key** brings you to the inspection-block setting facility

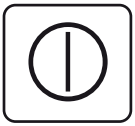




Inspection-block condition

- the last setting is displayed, e.g.:
  - **OFF** = block inactive
  - **ON** = block active

- by pressing a **arrow key** ...



- ... and confirming with the **ON/OFF key** you can set the desired condition
- this setting is preserved even when the instrument is switched off

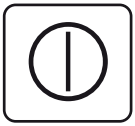
- pressing the **arrowup key** brings you to the PIN-code setting facility

9.5 Setting the PIN

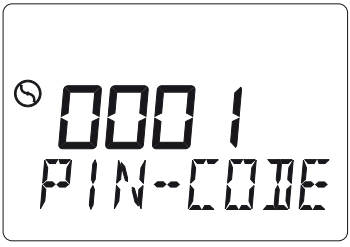
PIN

- you can set your **SR2-DO** so that only authorised persons, e.g.:
  - instrument technicians
  - experts

  have access to the information menu with all its subfunctions
- this involves setting a PIN that must be entered every time the information menu is called
- when an incorrect PIN is entered the instrument reverts to its switch-on routine



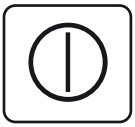
- briefly pressing the **ON/OFF key** brings you to the PIN-code setting facility



Setting the PIN

- the last PIN to be set (**0001** = factory setting) appears in the LCD
- we recommend you to use a different PIN

- by pressing or holding down a **arrow key** ...



- ... and confirming with the **ON/ OFF key** you can set each of the 4 digits from left to right to the desired PIN

PIN = 0000

- the function is inactive, every user has access to the information menu

PIN = 0001 – 9999

- the function is active, only persons who know the set PIN have access to the information menu
- this setting is preserved even when the instrument is switched off

- pressing the **arrow-up key** brings you to the LCD check facility

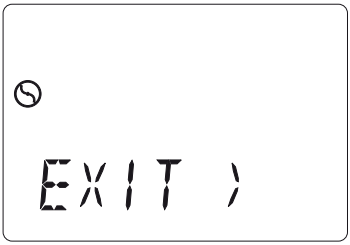
Note:
Make a note of your PIN and only give it to authorised persons.

If you forget your PIN, please contact SEWERIN Service.

9.6 Checking the LCD

- with this function you can carry out a **visual check** that all segments of the LCD are in working order
- confirm the LCD check with the **ON/OFF key**
- all the possible LCD characters and symbols are activated
- pressing the **arrow-up key** brings you to the exit from the menu

9.7 Leaving the system menu



EXIT >

- signpost (>) to menu level 1
- pressing the **ON/OFF key** leaves the memory menu
- you are now back at the top main-menu level and can switch between the following menu items:
  - **ADJUSTMENT**
  - **MEMORY**
  - **SYSTEM**
  - **EXIT**

10 Technical aspects

10.1 Technical notes

Probe hoses

The rule of thumb is: the concentration display is delayed by about 1 second for every metre of hose.

Always use SEWERIN probe hoses 1 m, 2 m or 6 m long. 12 m is the maximum length, which should not be exceeded.

Cleaning

The instrument should be cleaned with a damp cloth. Use no solvents, benzene or similar substances.

Static charge

Electrostatic charges should generally be avoided. Electrostatically floating objects (like metallic housings with no earth connection, for example) are unprotected against charges transferred from dust, aerosols and the like.

Fine dust filters

There are fine dust filters in the removable probe connection (item 3) and in most probes.

Note:
Heavily-soiled filters should be replaced (cf. section 10.4: Wearing parts).

10.2 Technical data

Instrument data	
Serial no:	046 01 XXXX (type - model - number) **without** explosion protection
Serial no:	046 03 XXXX (type - model - number) **with** explosion protection
Dimensions:	129 x 192 x 65 mm (W x H x D)
Weight:	about 1500 g (depending on sensor equipment)
Type of protection:	IP54
Volume of the buzzer:	typically 95 dB (A) in 30 cm distance
Permissible ranges	
Operating temp.:	-10 °C – +40 °C
Storage temp.:	-20 °C – +40 °C
Humidity range:	15% r.h. – 90% r.h. (not condensing) (briefly 5 % r.h. – 90 % r.h.)
Pressure range:	800 hPa – 1200 hPa
Explosion protection (CENELEC) (valid for serial nos. beginning with 046 03)	
Testing institution:	Physikalisch-Technische Bundesanstalt, Braunschweig
Test number:	PTB 96 ATEX 2166, supplements 1 and 3
Identification mark:	Ⓔx II 2 G EEx ib d IIB T3
Power supply	
Operating time:	min. 10 h
Battery type:	NiCd, rechargeable
Charge voltage:	12 V=
Charge current:	380 mA
Charge time:	13 h
Pump power:	> 50 l/h and >150 mbar
Serial interface:	RS 232, accessory cable if required

Methane/carbon dioxide CH_4/CO_2 sensor

Sensor data

- measurement principle:	thermal condictivity (TC)
- measurement range:	0 – 100 vol.% in steps of 0.1 vol.% to 9.9 vol.% (CH_4) or in steps of 1 vol.% (CO_2)
- t_{90} time:	< 30 seconds
- storage temperature:	-20 °C – +60 °C (for replacement sensors)

Lifetime

- guaranteed:	1 year
- expected:	5 years

Test gases

- zero point:	fresh air
- sensitivity:	100 vol.% CH_4
- sensitivity:	100 vol.% CO_2

Oxygen O_2 sensor

Sensor data

- measurement principle: electrochemical sensor (EC)
- measurement range: 0 – 25.0 vol.% (AL3) in steps of 0.1 vol.%
- t_{90} time: < 30 seconds
- storage temperature: 0 °C – +20 °C (for replacement sensors)

Temperature influence

- sensitivity: < 0.3 % signal / °C

Cross-sensitivity

- CO_2: at 5 vol.% CO_2 in 23 vol.% O_2 <= 1 % O_2
- no others known

Lifetime

- guaranteed: 20 months
- expected: 24 months

Test gases

- zero point: 100 vol.% CH_4
- sensitivity: fresh air

Hydrogen sulphide H_2S 100 ppm sensor

Sensor data

- measurement principle: electrochemical sensor (EC)
- measurement range: 2 – 100 ppm (AL3) in steps of 1 ppm
- zero point drift: 3 ppm
- t_{90} time: < 30 seconds
- storage temperature: 0 °C – +20 °C
  (for replacement sensors)

Alarm thresholds (factory settings)

- H_2S: AL1 = 10 ppm AL2 = 20 ppm

Temperature influence

- zero point: no temperature influence
- sensitivity: < 0.5 % signal / °C

Time drift: < 0.3 ppm / month

Cross-sensitivity at 20 °C

- 100 ppm CO: ~ 3 ppm H_2S
- 20 ppm CL_2 ~ -1 ppm H_2S
- 500 ppm C_2H_4 ~ 2 ppm H_2S
- 2 vol.% H_2: ~ 100 ppm H_2S
- 10 ppm SO_2 ~ 3 ppm H_2S
- none known

Lifetime

- guaranteed: 2 years
- expected: 3 years

Test gases

- zero point: fresh air
- sensitivity: 40 ppm H_2S in synthetic air

Hydrogen sulphide H_2S 2000 ppm sensor

Sensor data

- measurement principle:	electrochemical sensor (EC)
- measurement range:	4 – 2000 ppm (AL3) up to 998 ppm in steps of 2 ppm from 1000 ppm in steps of 10 ppm
- t_{90} time:	< 30 seconds
- storage temperature:	0 °C – +20 °C (for replacement sensors)

Lifetime

- guaranteed:	2 years
- expected:	3 years

Test gases

- zero point:	fresh air
- sensitivity:	40 ppm H_2S in synthetic air

Carbon monoxide CO sensor

Sensor data

- measurement principle: electrochemical sensor (EC)
- measurement range: 2 – 500 ppm (AL3) in steps of 1 ppm
- zero point drift: 4 ppm
- t_{90} time: < 30 seconds
- storage temperature: 0 °C – +20 °C
  (for replacement sensors)

Alarm thresholds (factory settings)

- CO: AL1 = 30 ppm AL2 = 60 ppm

Temperature influence

- zero point: < 5 ppm
- sensitivity: < 1.4 % signal / °C

Time drift: < 0.3 ppm / month

Cross-sensitivity at 20 °C

- 1000 ppm H_2: ~ 450 ppm CO
- 100 ppm NO ~ 25 ppm CO
- none known

Lifetime

- guaranteed: 2 years
- expected: 3 years

Test gases

- zero point: fresh air
- sensitivity: 40 ppm CO in synthetic air

Ammonia NH_3 sensor

Sensor data

- measurement principle: electrochemical sensor (EC)
- measurement range: 2 – 100 ppm (AL3) in steps of 1 ppm
- zero point drift: 1 ppm
- t_{90} time: < 90 seconds
- storage temperature: 0 °C – +20 °C
  (for replacement sensors)

Alarm thresholds (factory settings)

- NH_3: AL1 = 50 ppm AL2 = 75 ppm

Temperature influence

- zero point: < 2ppm
- sensitivity: no temperature influence

Time drift: < 0.3 ppm / month

Cross-sensitivity at 20 °C

- none known

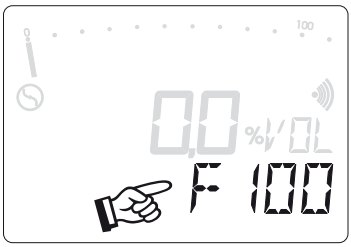
Lifetime

- guaranteed: 1 year
- expected: 2 years

Test gases

- zero point: fresh air
- sensitivity: 50 ppm NH_3 in nitrogen

10.3 Error messages



- the **SR2-DO** detects faults itself and displays an error code in the LCD

Error code	Cause, remedy and error properties
F1	Sensor error: No sensor detected Remedy: turn instrument on again, contact SEWERIN Service Result of error: instrument switches off
F22, 24	Adjustment error: Zero point in the CH_4/CO_2 range Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting
F23, 25	Adjustment error: Sensitivity in the CH_4 range Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting
F26 – 28	Adjustment error: Sensitivity in the CO_2 range Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting
F32	Adjustment error: Zero point in the O_2 range (EC), Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting
F33	Adjustment error: Sensitivity in the O_2 range (EC), Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting

Error code	Cause, remedy and error properties
F34	Adjustment error: Zero point in the CO, H_2S, NH_3 range Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting
F35	Adjustment error: Sensitivity in the CO, H_2S, NH_3 range (EC) Remedy: check test gas, repeat adjustment Result of error: 3s alarm, self-resetting
F42	O_2 sensor error: Reading below measurement range Remedy: adjust or replace O_2 sensor, Result of error: self-resetting, not clearable
F43	CO sensor error: Reading below measurement range Remedy: adjust or replace CO sensor, Result of error: self-resetting, not clearable
F44	H_2S sensor error (100 ppm): Reading below measurement range Remedy: adjust or replace H_2S sensor, Result of error: self-resetting, not clearable
F45	NH_3 sensor error: Reading below measurement range Remedy: adjust or replace NH_3 sensor, Result of error: self-resetting, not clearable
F47	H_2S sensor error (2000 ppm): Reading below measurement range Remedy: adjust or replace H_2S sensor, Result of error: self-resetting, not clearable
F50	Microcontroller ROM test: Self test defective Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable

Error code	Cause, remedy and error properties
F51	Microcontroller RAM test: Self test defective Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F52	EEPROM test: Read-write error detected Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F53	A/D converter: A/D converter defective Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F54	External RAM test: Self test defective Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F55	Clock module: Clock error Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F56	LCD driver: LCD driver error Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F67,68	Thermal-conductivity (WL/WL) sensor error: Remedy: turn instrument on again, contact SEWERIN Service Result of error: clearable

Error code	Cause, remedy and error properties
F75 – F78	Component-error sensor: Remedy: turn instrument on again, contact SEWERIN Service Result of error: locking, not clearable
F100	Pump power too low: Remedy: turn instrument on again, Check filters in the instrument and probes Result of error: locking, not clearable
F250	Discharge warning (after 15 minutes operation): Remedy: charge the instrument Result of error: clearable
F255	Data memory: End of data memory if ring memory OFF (see INFO / MEM / MEM-STOP) Result of error: clearable

Alarm	Cause, remedy and result of error
AL3	End of measuring range: Sensor reached end of measuring range Warning behaviour: self-resetting on reaching measuring values lower end of measuring range

10.4 Wearing parts

Fine dust filter..... in the probe connection from the **SR2-DO** (item 3) and in most probes

Hydrophobic filter..... in the 1 m, 2 m and 6 m probe hoses

Test gas can..... various concentrations for monitoring and adjustment

Note:
Test gas bottles are under pressure, do not store above 50 °C. Do not exceed storage time limits.

10.5 Spare parts

Note:
When ordering replacement parts, please take these from the relevant Service instructions.

10.6 EC-sensor disposal

Note:
EC-sensors must be disposed of by a specialist disposal company.

11 Hints on Disposal

The disposal of instruments and accessories is governed by the European Waste Catalogue (EWC).

Type of Waste	Corresponding EWC Code
Instrument	16 02 13
Test gas can	16 05 05
Battery, accu	16 06 05

Old Instruments

Old instruments can be returned to Hermann Sewerin GmbH. We will arrange the qualified disposal free of charge through certified specialists.

Konformitätserklärung / Declaration of Conformity

Gerätebezeichnung: *Type of Product:*	**tragbares, batteriebetriebenes Gasmeßgerät** **portable battery-operated gas measuring device**
Geräte-Typ: *Product Name:*	**SR2-DO**
Fabrikations-Nr.: *Fabr.No.:*	**046 01 xxxx**

Hiermit erklären wir, daß oben genanntes Produkt mit der / den folgenden Norm(en) oder normativen Dokument(en) übereinstimmt. Bei einer mit uns nicht abgestimmten Änderung des Produkts verliert diese Erklärung ihre Gültigkeit.

We hereby declare that the above product complies with the following norms or standardized directives. In case of any modification of this product which has not been authorized by us, this declaration becomes invalid.

Norm(en) / Norm(s):

DIN EN 50 081-1	*EMV - Fachgrundnorm Störaussendung* *Generic Emission Standard*
DIN EN 50 082-2	*EMV - Fachgrundnorm Störfestigkeit* *Generic Immunity Standard*

Fundstellen bzgl. EN 50 081/82 sind Amtsblätter der EG Nr. C 44/12 bzw. Nr. C 90/2
The Norms EN 50 081/82 are recorded in the Gazette of the EG No. C 44/12 and No. C 90/2 resp.

Gemäß den Bestimmungen der Richtlinie(n) / The unit is in accordance with:

89/336/EWG	*EG-Richtlinie : Elektromagnetische Verträglichkeit* *EG-Directive: Electromagnetic Compatibility*
92/31/EWG	*Änderung dazu /amendment to above*
93/68/EWG	*Änderung dazu /amendment to above*

TEST REPORT **SR2-DO**
Sensor
Serial no. (e.g. 046 01 0001)

CH_4	CO_2	O_2	H_2S	CO	NH_3

SEWERIN

01.08.2005

1.0	**Device status**											
1.1	- status correct (e.g.: Y / N)											
1.2	- fine dust filters ok (e.g.: Y / N)											
1.3	- remaining operating hours (e.g.: 5 h)											

2.0	**Pump test**											
2.1	- low pressure > 150 mbar											
2.2	- volumen flow > 30 l/h											

3.0	**CH_4-range**											
3.1	zero point (fresh air) - display -1,0 – +1,0 vol.%											
3.2	test gas 100 vol.% CH_4 - display 97 – 103 vol.%											

4.0	**CO_2-range**											
4.1	zero point (fresh air) - display -1 – +1 vol.%											
4.2	test gas 100 vol.% CO_2 - display 97 – 103 vol.%											

5.0	**O_2-range**											
5.1	zero point (test gas 100 vol.% CH_4) - display -0,5 – +0,5 vol.%											
5.2	test gas (fresh air) - display 20,4 – 21,4 vol.%											

6.0	**H_2S-range**											
6.1	zero point (fresh air) - display -10 – +10 ppm											
6.2	test gas (40 ppm H_2S) - display 36 – 44 ppm											

7.0	**CO-range**											
7.1	zero point (fresh air) - display -3 – +3 ppm											
7.2	test gas (40 ppm CO) - display 37 – 43 ppm											

8.0	**NH_3-range**											
8.1	zero point (fresh air) - display -3 – +3 ppm											
8.2	test gas (50 ppm NH_3) - display 47 – 53 ppm											

9.0	**Observations** - housing broken - adjustment, repair - factory inspection - or the like											

10.0	**Test**											
	- day											
	- month											
	- year											
	- signature
